ProLong™
Long Term Absorbable Punctum Plug

FCI Ophthalmics introduces the ProLong™ Plug, a long term plug to supplement the company's line of short term collagen plugs and non-dissolvable Ready-Set Punctum Plugs.

ProLong™ plugs are designed to provide patient comfort from dry eye components of various ocular surface diseases for up to 3 or more months. This long lasting temporary plug is effective and economical for transient dry eye symptoms following surgery and ideal for post-op dry-eye management of LASIK patients.

The new long term synthetic punctal plug is composed of an absorbable copolymer material and comes in three sizes: 0.3mm, 0.4mm and 0.5mm in diameter and 2.0mm in length. The plugs are packaged in same sizes or in a variety pack of all three sizes.

For more information on the ProLong™ Plugs and all dry-eye products, contact FCI Ophthalmics.
