FCI®

a ZEISS company

Since its inception in 1984, FCI has become a world leader in developing innovative solutions essential in the treatment of dry eye, lacrimal, lid, orbit, cataract and retina indications. In close collaboration with the world’s leading ophthalmic surgeons, FCI continues to be on the cutting-edge of research, testing and manufacturing of gold standard medical devices that garner unparalleled trust and reliability. The ability to understand, anticipate and respond to the research has resulted in FCI’s strong portfolio of globally recognized products. FCI is committed to serving the ophthalmic industry with the expertise and value that is key to quality patient care. All FCI Ophthalmics products are cleared by FDA for commercial distribution.

EPIPHORA

PUNCTAL STENOSIS

PVP PRELOADED PERFORATED PLUGS

FCI’s PVP PRELOADED perforated plugs are used to treat excessive tearing due to partial occlusion of punctum and punctal stenosis. They act as conformers by keeping the punctal opening dilated for several weeks allowing tears to drain. These plugs are coated with a thin layer of polyvinylpyrrolidone (PVP) to improve the hydrophilic properties of silicone.* This enhances the efficiency of tear drainage and limits the accumulation of debris at the surface.

Designed by J.A. Bernard, MD

- Indicated for partial occlusion or punctal stenosis
- PVP coated medical grade silicone
- Slanted collarette for a better anatomical fit against the eyelid margin
- Exclusive polishing for a perfectly smooth surface
- Preloaded on a single use plug inserter to facilitate insertion
- Individually packaged, sterile

PRELOADED PVP PERFORATED PLUG	SIZE	WIDTH	CHANNEL DIAMETER	PACKAGING

BALLOON CATHETER

DACRYOCYSTOPLASTY (DCP)

OPHTACATH®

OPHTACATH® is a lacrimal duct balloon catheter which achieves true dilation of the lacrimal duct and effectively treats the symptoms of epiphora. It consists of a semi-flexible stainless steel stylet covered with polyether block amide (PEBA) tubing and a Nylon Polyn® balloon.

- Indicated for dilation of an obstructed nasolacrimal duct to treat epiphora
- Fast and effective procedure
- Less invasive, reduced trauma
- Eliminates placement of tubes
- Exclusive tapered tip
- Unique balloon design retains folding memory
- Exceptional resistance to burst pressure
- Highly precise inflation system
- Includes single use inflation device
- Bilateral Kit includes stopcock for simultaneous inflation
- Sterile

Recommended: 2 mm for patients 12 months to 30 months and 3 mm for 30 months and older

INTUBATION SETS

MONOCANALICULAR INTUBATION

MINI-MONOKA®

Designed by B. Fayet, MD and J.A. Bernard, MD

- Indicated for canalicular lacerations involving external 2/3 of one canaliculus
- No knot or suture necessary
- Stent is securely anchored at punctum by fixation head
- Medical grade silicone
- Sterile

Required: Single Use Punctum Dilator and Plug Inserter (S1.3090)

FCI EXCLUSIVE

MINI MONOKA®	DIAMETER	MATERIAL	PACKAGING

MONOCANALICULAR NASOLACRIMAL INTUBATIONS

LACRIJET®

LACRIJET® is FCI's latest, exclusive, preloaded and self-retaining monocular nasolacrimal intubation indicated for epiphora, congenital nasolacrimal duct obstruction and canalicular laceration. It consists of a single use injector handpiece into which a silicone tube is preloaded inside a metallic guide. LACRIJET® has been specifically designed to reduce operating time in both the intubation phase and the removal of the device.

LACRIJET® is first introduced into the nasolacrimal duct. Once in position, the sliding piston is retracted and the silicone intubation is released. It is maintained in place at the punctum by a plug-like fixation head. No nasal retrieval, knots or sutures are needed.

The 15 mm and 20 mm lengths have been specifically designed for canalicular laceration repair to prevent future canalicular obstruction due to scar tissue formation.

FCI EXCLUSIVE

- Indicated for the treatment of congenital nasolacrimal duct obstruction, canalicular laceration, and epiphora in patients 12 months and older
- Exclusive new injection system
- Silicone tube preloaded inside metallic guide
- No nasal retrieval
- No knots or sutures needed
- 3 mm plug collarette
- Sterile

Required: Single Use Punctum Dilator and Plug Inserter (S1.3090)
Single Use Sizer (S1.1288) - See page 19

INTUBATION SETS

MONOCANALICULAR NASOLACRIMAL INTUBATIONS

MASTERKA®

Designed by B. Fayet, MD

MASTERKA® is intended for the treatment of congenital nasolacrimal duct obstruction resistant to probing. Unlike the traditional pulled technique in which the stent is advanced through the nasolacrimal system and retrieved through the nose by pulling on the guide, probe or thread, the MASTERKA® is not attached to a probe or suture. MASTERKA® is pushed into the nasolacrimal duct and anchored in place at the punctum by a plug-like fixation head.

- Indicated for congenital nasolacrimal duct obstructions
- Easy to insert
- No nasal retrieval
- No knots or sutures needed
- Less traumatic
- 3 mm plug collarette
- Medical grade silicone
- Sterile

Required: Single Use Sizer (S1.1289)
Recommended: Single Use Punctum Dilator and Plug Insertter (S1.3090) - See page 19

FCI EXCLUSIVE

SELF-THREADING MONOKA® (RITLENG® TYPE)

Designed by B. Fayet, MD and J.A. Bernard, MD

- Indicated for congenital nasolacrimal duct obstruction and canalicular pathologies
- Securely anchored at the punctum by a plug-like collarette
- PEEK (PolyEtherEtherKetone) black thread guide
- Medical grade silicone; PVP option
- Sterile

Required: Ritleng® set of instruments (S1.1460 and S1.1480)
Recommended: Single Use Punctum Dilator and Plug Insertter (S1.3090) and Ritleng® Endonasal Forceps (S1.1470) - See pages 18 and 19

SELF-THREADING MONOKA®	COLLARETTE	TUBE DIAMETER	TUBE MATERIAL	PACKAGING

Proprietary «stair step» design provides greater stability

WIDE/MEDIUM COLLARETTE MONOKA®

Designed by B. Fayet, MD and J.A. Bernard, MD

- Indicated for congenital nasolacrimal duct obstruction and canalicular pathologies
- Securely anchored at the punctum by a plug-like collarette
- Non-traumatic, rounded tip, stainless steel probe (80 mm length)
- Medical grade silicone
- Sterile

Recommended: Single Use Punctum Dilator and Plug Insertter (S1.3090) - See page 19

MONOKA®	COLLARETTE	TUBE DIAMETER	TUBE MATERIAL	PACKAGING
S1.1710	Medium - 3 mm	0.64 mm	Silicone	Box of 3
S1.1630	Wide - 4 mm	0.64 mm	Silicone	Box of 3

Unique crimping process provides stronger connection between the tube and metal probe, virtually eliminating risk of separation during procedure.

INTUBATION SETS

MONOCANALICULAR NASOLACRIMAL INTUBATIONS

MONO-CRAWFORD

Designed by B. Fayet, MD and J.A. Bernard, MD

- Indicated for congenital nasolacrimal duct obstruction and canalicular pathologies
- Securely anchored at the punctum by a plug-like collarette
- Stainless steel probe with olive tip (111 mm length)
- Medical grade silicone; PVP option
- Sterile

Required: Crawford Hook (S1.1275) - See page 18

Recommend: Single Use Punctum Dilator and Plug Inserter (S1.3090)

BICANALICULAR INTUBATIONS

SELF-RETAINING BICANALICULUS INTUBATION SET II (SRS II)

Designed by P. Bigé, MD

The SRS II comes preloaded on a set of introducers for ease of insertion. The placement of the SRS II can be performed as an in-office procedure at the slit lamp.

- Indicated to treat punctal stenosis and horizontal lacrimal duct obstruction
- Silicone wings at each end ensure stability in the lacrimal sac
- Central mark confirms proper placement
- Medical grade silicone
- Set includes stent and single use dilator
- Sterile

Required: Single Use Sizer (S1.1289)

FCI EXCLUSIVE

INTUBATION SETS

BICANALICULAR NASOLACRIMAL INTUBATIONS

FCI NUNCHAKU®

FCI NUNCHAKU® is a pushed silicone self-retaining bicanalicular nasolacrimal intubation stent that acts like a conformer, allowing tears to drain by capillarity. The metallic guides are located inside the lumen, not as an extension of the stent as in conventional intubation sets; therefore, no nasal retrieval is needed.

- Indicated for canalicular pathologies, congenital nasolacrimal duct obstruction, and dacryocystorhinostomy (DCR)
- No nasal retrieval
- 0.60 mm diameter interpalpebral loop for comfortable fit
- Stability is achieved by the larger diameter stent segments in the sac at the junction of the common canaliculus
- No knot or suture needed
- Medical grade silicone
- Sterile

NUNCHAKU®	LENGTH	TUBE DIAMETER	MATERIAL	PACKAGING
S1.1361	90 mm (for children)	1 mm	Silicone	Box of 1
S1.1371	105 mm (for adults)	1 mm	Silicone	Box of 1

BICANALICULAR NASOLACRIMAL INTUBATIONS

RITLENG®+

Autostable Ritleng® Intubation

RITLENG®+ is FCI's latest autostable, bicanalicular, nasolacrimal intubation indicated for epiphora, canalicular pathologies, congenital nasolacrimal duct obstruction and dacryocystorhinostomy (DCR). It consists of a silicone tube connected at each extremity to a black Polyetheretherketone (PEEK) thread guide. It is designed to reduce operating time and trauma for patients, in both the intubation phase and the removal of the device.

The intubation is self-retaining due to two larger diameter portions of the silicone tube. The surgical procedure is similar to the conventional Ritleng® nasolacrimal intubation and involves the use of Ritleng® instruments. The hollow Ritleng®+ Probe is inserted into the nasolacrimal duct and the thin PEEK thread is fed through the probe.

- Indicated for the treatment of epiphora, canalicular pathologies, congenital nasolacrimal duct obstruction and dacryocystorhinostomy (DCR) in patients age 12 months and older
- Standard 0.64 mm silicone tube for a comfortable fit in the interpalpebral space
- Wider 0.94 mm silicone segments positioned in the lacrimal sac ensuring the self-retaining feature of the intubation: no need for knots or sutures
- Black mark to control the central placement and correct positioning of the silicone tube between the two puncta
- PEEK length: 500 mm
- Easy nasal retrieval

Required: Ritleng® set of instruments (S1.1460 and S1.1480)
Recommended: Ritleng® Endonasal Forceps (S1.1470) – See page 18

INTUBATION SETS

BICANALICULAR NASOLACRIMAL INTUBATIONS

RITLENG® LACRIMAL INTUBATION SET

FCI's RITLENG® intubation system consists of a silicone or PVP coated silicone tube connected at each extremity to a black Polyetheretherketone (PEEK) thread guide to reduce time and trauma in lacrimal duct intubation surgery.

The procedure involves inserting the hollow Ritleng® Probe into the nasolacrimal duct and feeding the thin PEEK thread guide through it. The probe is then withdrawn, leaving the PEEK thread guide to pull the silicone tubing into place.

- Indicated for the treatment of:
 - In infants: epiphora in cases of dacryocystorhinostomy (DCR) and imperforation of the nasolacrimal duct
 - In adults: epiphora in cases of DCR
- Less traumatic for patients
- Easy retrieval from the nose
- PEEK length: 500 mm
- Medical grade silicone; PVP option
- Sterile

Required: Ritleng® set of instruments (S1.1460 and S1.1480)

Recommended: Ritleng® Endonasal Forceps (S1.1470)

JONES TUBES

CONJUNCTIVODACRYOCYSTORHINOSTOMY (CDCR)

STOPLOSS™ JONES TUBES

The StopLoss™ Jones tube system puts an end to the high loss rate of ordinary Jones Tubes, yet is safe, effective and easy to use.*

The unique patented tube design leads to exceptional levels of tube stability. A new introducer system ensures simple and accurate tube placement every time.

- Indicated for use during repair of the lacrimal system for intubation and bypass to canicular pathologies
- Internal flexible silicone flange prevents tube extrusion
- Simple to insert using dedicated single use Introducer Set to choose the appropriate diameter and length of tube
- Excellent tear drainage
- Sterile, Box of 1

Required: STOPLOSS™ JONES TUBE Introducer Set (S1.7500) Recommended: STOPLOSS™ JONES TUBE Removal Tool (S1.7600)

PERMANENT PUNCTAL PLUGS

SNUGPLUG™

SNUGPLUG™ is the result of our extensive research on Dry Eye syndrome over the last 30 years. It relieves the discomfort associated with Dry Eye symptoms quickly and effectively to improve the patient’s quality of life. SnugPlug™ is a one-size-fits-most punctum plug that eliminates sizing and simplifies stocking. Pre-stretched on an inserter, it avoids the need for dilation and facilitates insertion. When released from the inserter, the SnugPlug™ returns to its natural shape assuring a snug fit and eliminating pop-out. Its soft collarette prevents migration and provides patient comfort.

- Indicated for punctal occlusion
- One-size-fits-most
- No sizing needed
- High retention rate*
- No dilation needed
- Ultra-thin collarette
- Medical grade silicone
- Individually packaged, sterile

PRELOADED PUNCTAL PLUGS

FCI's PRELOADED PUNCTAL PLUGS are "ready-set" plugs with an ultra-thin silicone collarette for maximum patient comfort. For ease of use, FCI punctal plugs are preloaded on a single use inserter/dilator and are easily removed with forceps.

Designed by J.A. Bernard, MD

- Indicated for punctal occlusion
- Original design
- Ergonomic slanted collarette (except Slim Plugs)
- Preloaded on single use inserter/dilator
- Good tolerance and optimal patient comfort
- Medical grade silicone
- Individually packaged, sterile

FCI EXCLUSIVE

Exclusive Slanted Collarette Plugs

The Extra Small to Large plugs feature the unique slanted collarette that hugs the natural curve of the lid margin. The slightly larger bulb resists migration and is designed to prevent pop-out.

PTOSIS REPAIR

PTOSE-UP®

FCI's PTOSE-UP® is a strip of biomaterial made of expanded PolyTetraFluoroEthylene (ePTFE), fitted with a needle at each extremity. It is used to join the upper eyelid to the frontalis muscle in ptosis surgery with frontalis suspension.

Designed by J.M. Ruban, MD

- Indicated for the surgical treatment of ptosis requiring brow suspension, where a Levator palpebrae is unusable following a functional deficiency or anatomic destruction
- Ready-to-use
- Excellent eyelid contour
- Biocompatible and biointegratable (70 µm pores)
- High tolerance, non-toxic, non-allergenic material
- No need for autologous tissue
- Needles (58 mm long) with ultra-sharp tips, attached to the Ptose-up® to facilitate strip insertion
- Sterile

FCI EXCLUSIVE

PTOSIS SLING

Designed by J.L. Louquet, MD and D. Guerin, MD

- Indicated for ptosis surgery with frontalis suspension
- Silicone tubing
- Silicone fixation sleeve for better tension/traction control
- Smooth connection between silicone tubing and needles
- No need for autologous tissue
- Needles (58 mm long) with ultra-sharp tips
- Sterile

Recommended: Watzke Forceps (S5.3100)

EYELID IMPLANTS

OCULID GOLD® IMPLANTS

OCULID® implants conform to the surface curvature of the eye, offering superior cosmesis and aesthetic satisfaction among patients. Additionally, they feature a sleek surface, anatomically friendly curvature with tapered edges, and smoothly rounded corners.

- Rapid post-operative recovery and excellent tolerance
- Excellent biocompatibility
- Restores dynamic blink and closure for functional results and lid cosmesis
- 1.0 mm thickness | 5.0 mm width
- Weight range from 0.6 g to 2.8 g in 0.2 g increments*
- 1.0 mm suture holes
- MRI Conditional**
- Sterile
- Box of 1

Required: Prior sizing. See OCULID® Sizing Set - See page 29

** Check IFU for MRI parameters

PTOSIS IMPLANTS

OCULID GOLD SLIM®
OCULID PLATINUM SLIM® IMPLANTS

OCULID® implants conform to the surface curvature of the eye, offering superior cosmesis and aesthetic satisfaction among patients. Additionally, they feature a sleek surface, anatomically friendly curvature with tapered edges, and smoothly rounded corners.

- Rapid post-operative recovery and excellent tolerance
- Excellent biocompatibility
- Restores dynamic blink and closure for functional results and lid cosmesis
- 0.6 mm thickness | 5.0 mm width
- Available in gold and platinum
- 40% thinner than regular Oculid® implantable weights
- Platinum density 11% higher than gold
- 1.0 mm suture holes
- MRI Conditional*
- Sterile
- Box of 1

Required: Prior sizing. See OCULID® Sizing Set - See page 29

OCULID® SIZING SET

OCULID® Sizing Set assists in selecting the appropriate implantable or external eyelid weight. The eyelid should close without difficulty and induce a slight ptosis of 1.0 mm.

Set includes:

- A storage case
- 7 sizing weights from 0.6 g to 1.8 g (0.2 g increments)
- 100 double-sided, hypoallergenic adhesive strips
- Skin tone selector card to best match patient's complexion
- For external use only
- Reusable, non-sterile

SIZING SET	PACKAGING
S3.7000	Box of 1

HYPOALLERGENIC ADHESIVE STRIPS

To attach OCULID® External Eyelid Weights to the upper eyelid.

ADHESIVE STRIPS	PACKAGING
S3.0500	Box of 100

EYELID WEIGHTS

OCULID® EXTERNAL EYELID WEIGHTS

- Effective non-surgical treatment
- Simple use and application
- Allows eyelid closure without difficulty
- Hidden behind superior palpebral fold
- Helps protect surface of the eye
- Relieves dry eye
- Strengthens levator muscles with continued use
- Induces slight ptosis (1.0 mm)
- Supplied with 100 double-sided, hypoallergenic adhesive strips
- Non-sterile
- Box of 1

Required: Prior sizing and color selection. See OCULID® Sizing Set – See page 29

ORBITAL IMPLANTS

EZYPOR®

EZYPOR® is FCI's ultimate high density polyethylene orbital implant with an innovative suturing platform.

EZYPOR® has a smooth anterior suturing surface with 8 suture tunnels allowing multiple suturing options.

The use of FCI's Orbital Sizers (S6.3060) is recommended to select the appropriate implant diameter which is essential to reach the utmost final cosmetic result.

EZYPOR® is gently inserted into the eye socket with the Sphere Introducer (S6.3050).

- Indicated for enucleation, evisceration and secondary implantation
- Made of Ultra High Molecular Weight PolyEthylene (UHMWPE)
- Porosity between 40 and 60% for optimum colonization of fibrovascular tissues
- Smooth anterior suturing platform with 8 suture tunnels to facilitate needle insertion and muscle fixation
- No need for autologous graft
- Sterile

Recommended: Orbital Sizers (S6.3060) and Sphere Introducer (S6.3050) - See page 35

EZYPOR®	MATERIAL	DIAMETER	PACKAGING

S6.6020	UHMWPE	20 mm	Box of 1
S6.6022	UHMWPE	22 mm	Box of 1

*EZYPOR® 12 mm and 14 mm do not have suturing platform.

Ultra High Molecular Weight PolyEthylene

FCI EXCLUSIVE

BIOCERAMIC ORBITAL IMPLANTS

FCI's BIOCERAMIC ORBITAL IMPLANTS provide an improved structure for vascularization and integration that is biocompatible, bioinert, nontoxic, and nonallergenic. Bioceramic orbital implants are stable, easily handled, and less sticky than other alternatives.

These orbital implants can be inserted easily into the orbital socket and do not cling to surrounding tissue. The improved connectivity that occurs between pores enhances vascularization, and the implants may be easily drilled without crumbling.

- Indicated for enucleation, evisceration and secondary implantation
- Made of 99% pure aluminum oxide (Al₂O₃)
- Material successfully used in orthopaedic and dental fields
- Porosity range: 200-550 µm
- Uniform interconnected pores, 85% of the total volume between 200 and 300 µm
- Strong, non-brittle, lightweight material
- Rapid and complete fibrovascularization
- Easy to insert: less sticky and no velcro effect
- Low tissue reaction and low exposure rate
- Regular surface: less irritation and less inflammation
- Two options: spherical or egg-shaped
- Sterile

Recommended: Orbital Sizers (S6.3060) - See page 35

SPHERICAL BIOCERAMIC	MATERIAL	DIAMETER	PACKAGING

FCI EXCLUSIVE

ORBITAL IMPLANTS

MESH-WRAPPED BIO CERAMIC IMPLANTS

This bioceramic implant is wrapped in vicryl mesh, allowing the secure attachment of extraocular muscles by suturing directly to the implant.

- Indicated for enucleation
- No need for donor sclera or autologous tissue
- Facilitates sphere introduction
- Mesh resorption in 45-60 days
- Sterile

Recommended: Orbital Sizers (S6.3060) - See page 35
